

CHEMICALS FOR POOLS

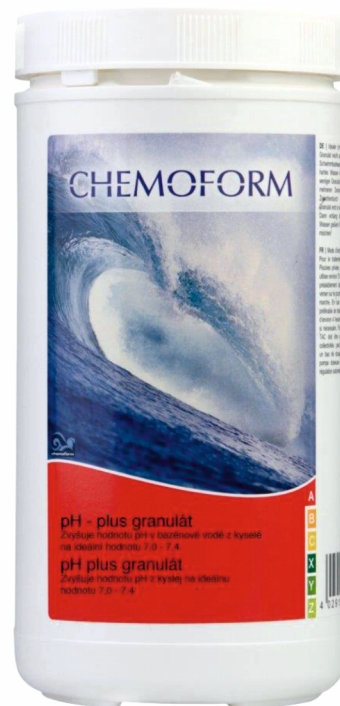

CHEMICALS FOR POOLS

Water treatment in the swimming pool or whirlpool can be implemented by various ways. Use of chemicals for water treatment is focused on keeping the pool water clean and health-safe.

Mini-20g slowly soluble multifunctional pills for small swimming pools (1kg pack). Multiple times effective. Pills with over 80% of active chlorine. Prevention to algae. Impurities flaking. Stabilized against the rapid release of chlorine due to the effects of sun and heat. Very slow dissolution. First pH shall be adjusted to the recommended value. Check the quantity of active chlorine in the pool water. Insert to the float or to skimmer 5 pills per 10m³ of pool water once per week. Check pH and chlorine regularly. Do not insert pills directly to the pool!

Use biocide products in a safe manner. Read carefully information on the label and the enclosed leaflet!

Chemoform pH minus granulate 1,5 kg

Swimming pools water pH adjusting product. Can be used along with chlorine as well as chlorine-free chemicals.

Long term efficiency due to stable composition. pH of the water dedicated for swimming shall be 7,2 – 7,6. pH shall be checked minimum twice a week. pH values over 7,6 may cause milky turbidity, reduced efficiency of chlorine products, chlorine smell, irritation of eyes and skin, clogging the filtration system. For decreasing the value of pH by 0,1 it is necessary to add cca 15g/m³ of water. (250 g of the product corresponds to app. 150 ml of measuring cup). Calculated quantity of the product shall be thoroughly dissolved in the water in a ratio of 1:100 and evenly poured onto water surface with the filtration device switched on. Check pH after several hours.

Chemoform – slowly soluble pills 200 g (1 kg pack)

Slowly soluble chlorine pills à 200 g. The product of long term efficiency, dedicated for intermittent treatment of swimming pool water, active chlorine content 80%. Universal use.

Slowly soluble, neutral pH. Stabilized for all degrees of hardness. Dedicated for long-period chlorination of swimming pool water, inserting 1 pill per 20 m³ of water each 8 – 14 days. Keep the pH value of pool water in the range 7,2 – 7,6. Chlorine content in the water and pH are continuously checked by the testers. Pills are applied by the skimmer, semi-automatic dispenser built into the circulating pipe or a float by a switched-on filtration device. Always read the instructions carefully before the application!

Use biocide products in a safe manner. Read carefully information on the label and the enclosed leaflet!

Sodium hypochlorite 50 l

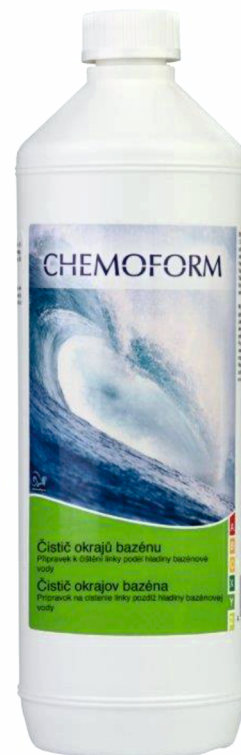

Sodium hypochlorite 50 l, liquid, appropriate mainly for chemical automatic dispensers. The product dedicated for a permanent disinfection of swimming pool water by an automatic dispenser.

- ▶ stabilized
- ▶ 12-15% of active Cl
- ▶ highly increases pH
- ▶ a liquid product for use in automatic dispenser systems
- ▶ not appropriate for small private swimming pools (no accurate dosage set-up)

Instructions for use:

Ideal pH: 7,0 – 7,4, ideal Cl: 0,6 – 1,0 mg/l

Dosing quantity depends on the swimming pool load and chlorine loss. We recommend to use automatic dispenser for a continuous control of pH and Cl.

Chemoform pool edge cleaner 1l

The product dedicated for cleaning the line along the water surface in the swimming pool.

Easy handling. Dissolves the sediments at the pool edges along the water level. Removes grease, soots, cosmetics residue and calcium sediments.

Usage instruction:

Decrease water line by several centimeters. Apply an un-watered product or watered product up to the ratio 1: 1 to a sponge or a cloth. Carefully wash the polluted area preventing from the product spill to the water. Always wipe surfaces with a cloth moistened with clean water.

Use biocide products in a safe manner. Read carefully information on the label and the enclosed leaflet!

A liquid product to treat swimming pool during winter season. The treated water remains clean and health-safe till spring season. Highly concentrated conservation tool in liquid form preventing from the calcium sediments, impurities and algae occurrence. Application at the end of the swimming season makes spring cleaning easier. Use biocide products in a safe manner. Read carefully information on the label and the enclosed leaflet!
